Devpost Hackathons Intelligence Guide (2026)

Comprehensive Brief: UGREEN AI NAS Hackathon & Dakar Bitcoin Hack

Executive Briefing Document

METRIC / PARAMETER	UGREEN AI NAS HACKATHON 2026	DAKAR BITCOIN HACK 2026
Host / Sponsor	UGREEN (Global Hardware & Storage Brand)	BTrust (Non-profit backed by Jack Dorsey & Jay-Z)
Total Cash Prize	**$46,000 USD Total**	**$900 USD Total**
First Prize	**$20,000 USD (Gold Award)**	$500 – $600 USD (Top Placements)
Submission Deadline	**Sunday, November 15, 2026** (11:45 PM PT)	**Friday, November 20, 2026** (3:00 PM EST)
Format & Location	Online Global Submission on Devpost	Online Global Submission on Devpost
Hardware Requirement	**No Physical Hardware Required** (Cloud testbed for finalists)	**No Physical Hardware Required** (Virtual/Testnet)
Tech Focus	Local AI, UGOS Skills, Python, Node, Docker, LLMs	Bitcoin Protocol, Lightning Network, Nostr, African Fintech
Team Size	1 to 3 members	1 to 4 members

1. UGREEN Hackathon 2026 on AI NAS: Bring Your Skills to UGOS

Recommended Top Priority

Devpost URL: ugreenhackathon.devpost.com

UGREEN is launching its flagship line of AI-enabled Network Attached Storage (NAS) units powered by **UGOS** (a Linux-based OS designed for local AI processing). Rather than sending private documents, photos, and files to cloud servers, UGOS executes local AI models directly in the user's home or office. Participants are challenged to build installable **AI Skills** for the *UGREEN Skills Hub*.

$20,000	$10,000	$6,000	$5,000 (x2)
🥇 Gold (1st Place)	🥈 Silver (2nd Place)	🥉 Bronze (3rd Place)	💡 Most Creative (2 Winners)

THE 4 TRACKS

- **Workflow:** Automate document sorting, receipt OCR, PDF intelligence, scheduled local backups.
- **Life:** Family media organization, semantic local photo search, voice memo indexing.
- **Creativity:** Local generative AI, video/audio editing assistants, design cataloging.
- **Innovation:** Edge IoT integrations, offline surveillance analysis, home automation.

SUBMISSION & EVALUATION

- **Round 1:** Project Proposal (PDF) + Skill Package (ZIP) created via UGOS Skill Developer Kit.
- **Round 2:** Top 30 finalists get *free remote cloud access* to physical UGREEN AI NAS hardware (iDX6011 Pro).
- **Criteria:** Usability (25%), Technical Completeness (25%), Innovation (25%), Potential Impact (25%).

Devpost Hackathons Intelligence Guide (2026)

Part 2: Dakar Bitcoin Hack, Strategic Verdict & Project Ideas

Strategy & Roadmap

2. Dakar Bitcoin Hack 2026 by BTrust

Devpost URL: dakar-bitcoin-hack-2026.devpost.com

Community / Web3 Track

Hosted by **BTrust** (the non-profit Bitcoin development initiative funded by Jack Dorsey and Jay-Z), this hackathon is held in conjunction with *Dakar Bitcoin Days*. The objective is to build practical, real-world tools that solve financial hurdles for everyday people across Senegal and Africa.

CORE TECHNOLOGY FOCUS

- **Bitcoin & Lightning Network:** Zero-fee, instant micropayments, local point-of-sale systems.
- **Nostr Protocol:** Censorship-resistant peer-to-peer data relays, identity, and social commerce.
- **AI + Bitcoin:** Autonomous AI agents equipped with Lightning wallets (L402 protocol / Satoshis).
- **Low-Bandwidth Fintech:** SMS/USSD offline transactions tailored for low-spec African devices.

PRIZES & KEY LOGISTICS

- **Prize Pool:** $900 USD distributed among top placing solutions.
- **Timeline:** Started Oct 26, 2026 ➔ Ends **Nov 20, 2026 (3:00 PM EST)**.
- **Format:** Virtual submission on Devpost (Demo video + GitHub repository required).
- **Eligibility:** Open globally to developers, designers, and economists.

3. High-Win Project Ideas You Can Build

Idea Blueprint

FOR UGREEN ($46,000 POOL)

"PrivateVault AI" — Local Asset & Warranty Sentinel:

Take your WarrantyVault concept to the local edge! Users drop receipts, appliance manuals, and purchase PDFs into their NAS folder. The local AI extracts serials, detects warranty expiration dates, and alerts the user locally before coverage lapses—with 100% data privacy.

FOR DAKAR BITCOIN ($900 POOL)

"SatsProof" — Micro-Escrow & Proof-of-Purchase:

A lightweight Lightning Network merchant invoice app designed for West African markets. Generates cryptographic Lightning receipts over Nostr relays so merchants and buyers have non-repudiable proof of warranty without expensive banking terminals.

🎯 Strategic Verdict & Recommendation

Recommendation: Prioritize UGREEN AI NAS Hackathon first. It features a massive **$46,000 prize pool** ($20,000 for 1st place), directly rewards document/file AI workflows that you have already built (receipt OCR, metadata extraction, privacy), and requires no physical hardware to submit Round 1 by November 15. The Dakar Bitcoin Hack (deadline Nov 20) can be entered as a secondary lightweight submission if you wish to experiment with Lightning Network payments.
